## Supply, repair installation, maintenance

Mawdsleys can help you with supply, installation, repair, maintenance and specification of the following:

- Irrigation systems
- Sewage pumping stations
- Storm water pumping stations
- Rainwater harvesting systems
- Boreholes and well pumping systems
- Water treatment and softeners
- HVAC Circulation pumps
- Variable Speed Drives

## Asset intelligence

One of the reasons why we have earned the trust of many block management and facility management companies is because of our asset management system.

We create Planned Preventative Maintenances for you, based on the initial service event. This guarantees that:

- Services are never missed
- Simplified compliance
- Extended asset lifespan

# WHY US

MAWDSLEYS  
- PUMP SERVICES -

## Swift repairs

We have a dedicated pump and motor repair workshop in Bristol to carry out repairs rather than replacements. This is crucial when replacement pumps have long lead times, or repair is more economical.

## Providing an expert second opinion – saves money and reduces risk

### The Challenge

A block management company were concerned by a constantly running booster set at one of the properties they managed, and they contacted Mawdsleys Pump Services for support. Our inspection quickly concluded that the problem was failed non-return valves. The survey further highlighted a failed variable speed drive and an expansion vessel that hadn't been maintained and could not be drained down – providing an environment conducive for legionella proliferation.

### The solution

The new Variable Speed Drive and non-return valves were quickly installed, and a drain cock and isolation valve added to the pressure vessel. Immediately the energy consumption of the booster set was reduced and the pressure vessel could now be correctly flushed during the six-monthly booster set service. A service contract that was awarded to Mawdsleys Pump Services based on the quality and speed of our response.

## A complex solution for a floating nightclub

### The Challenge

We were contacted by a local nightclub that had issues with water pressure and supply during peak times. On busy nights, the mains water supply was no sufficient to supply toilets on the upper decks of the boat. The nightclub needed a booster set and cold water storage tank, but the limited space on board, meant Mawdsleys engineers had to get creative.

### The solution

Our engineers installed a Pedrollo Flow V Twin Booster Set inside a GRP combination unit with a 2,000 litre tank. This was installed on the side of the harbour – next to the nightclub. The equipment was install in one day with no disruption to the nightclub's operations. Mawdsleys now carry out regular servicing on the booster set and tank to ensure the nightclub never runs out of water again.
